Our Engagement Model

Hire expert resources from Tech2globe on hourly or full time (dedicated monthly) basis who have core knowledge of procedures required for the data management services we provide.

FIXED COST

For fixed cost projects, we analyse the requirement and then give the fixed cost based on the efforts needed.

MONTHLY SUBSCRIPTION

In this engagement model, we guarantee a fixed budget for the project, on a month-to-month basis. The main advantage of a fixed price model is that it allows you to plan and set an exact budget for long term projects.

HOURLY BASED

In this engagement model, we will get paid for the number of hours that we have worked, rather than being paid a fixed price for a specific deliverable.

FTE BASED

“FTE stands for “full-time employee”, where we will align 1 employee or more than 1 employees at your project depending upon your needs and workload.

Project Management Process

Agile SDLC is Iterative and Incremental, Each cycle delivers a potentially shippable product increment, and SDLC phases repeat in every sprint.

SUZUKI CASE STUDY

- **Client:** Suzuki Motorcycle India Pvt. Ltd.
- **Industry:** Automotive / Two-Wheelers
- **Website:** www.suzukimotorcycle.co.in
- **Services:** UI/UX Design, Website Development

Client Overview

Suzuki Motorcycle India is a wholly owned subsidiary of Suzuki Motor Corporation, Japan. As a leading brand in India's two-wheeler market, Suzuki required a world-class digital presence to match their innovative product lineup and growing customer base.

Challenge

Suzuki needed a high-performance, visually engaging website that:

- Showcased its diverse product range,
- Delivered a seamless experience across devices,
- Supported marketing, lead generation, and service tools.

Our Solution

We redesigned and rebuilt the Suzuki Motorcycle website from the ground up:

- **User-Centered Design:** Clean, responsive layouts with product-focused UI.
- **Custom Development:** Robust architecture for speed and scalability.
- **Integrated Tools:** Dealer locator, service bookings, and comparison features.
- **CMS Flexibility:** Empowering the client to manage content internally.

Technology Stack

Frontend:

- HTML5, CSS3
- JavaScript (ES6+)
- React.js
- Bootstrap

Backend:

- Node.js
- Express.js
- RESTful APIs

Infrastructure & CMS:

- AWS (Hosting, CDN, S3)
- Headless CMS / Custom Admin Panel
- Google Analytics & SEO Tools

Key Results

- ⌚ 55% faster page load times
- 📱 100% mobile optimization
- 📊 40% longer user sessions
- ⚙️ Modular CMS for quick updates and launches

- **Client:** Cantabil Retail India Ltd.
- **Industry:** Fashion & Apparel
- **Website:** www.cantabilshop.com
- **Services:** Website Design, UI/UX, Custom E-commerce Development

Client Overview

Cantabil is a leading fashion retail brand in India, offering a wide range of formal wear, casual wear, and accessories. With 500+ stores nationwide, Cantabil wanted a modern e-commerce platform to complement its offline presence and serve growing digital shoppers.

Challenge

Cantabil required a full-scale e-commerce solution that:

- Reflected its premium retail identity online. Integrated with inventory, payments, and logistics systems
- Offered smooth navigation and shopping experience
- Handled large product catalogs and frequent promotions

Our Solution

We partnered with Cantabil to build a robust online shopping experience:

- **Modern UI/UX Design** aligned with fashion industry best practices
- **Custom E-commerce Platform** with scalable architecture
- **Smart Filters & Category Navigation** for easy product discovery
- **Integrated Checkout** with secure payment gateways & shipping APIs

Technology Stack

Frontend:

- HTML5, CSS3
- React.js / Tailwind CSS

Backend:

- Shopify
- Node.js
- MySQL
- RESTful APIs / GraphQL

Infrastructure & CMS:

- AWS Hosting / Cloudflare CDN
- Admin CMS for product and order control
- Google Analytics & SEO Tools

Key Results

-  35% increase in online sales within 3 months
-  50% drop in mobile bounce rate
-  Streamlined operations through real-time inventory sync
-  Faster load speeds and improved performance scores

CASE STUDY

- **Client:** Electronics and Computer Software Export Promotion Council (ESC)
- **Industry:** IT Services / Trade Promotion
- **Website:** www.indiasoft.org
- **Services:** Website Design, Development, CMS Integration, Performance Optimization

Client Overview

IndiaSoft is India's flagship international IT exhibition and conference, hosted by the ESC to connect global buyers with Indian technology exporters. It serves as a digital gateway for thousands of participants to register, explore exhibitors, and schedule B2B meetings.

Challenge

IndiaSoft required a fast, modern, and scalable website to:

- Handle **high-traffic spikes** during event seasons
- Offer a **user-friendly registration** system for buyers and exhibitors
- Present **program details, speaker info, and exhibitor showcases**
- Enable easy **content updates** and SEO visibility

Our Solution

We redesigned and rebuilt the IndiaSoft portal with a user-centric and admin-friendly approach:

- **Responsive UI/UX Design** aligned with ESC's brand identity
- **Custom Registration System** for multiple user types (buyers, exhibitors, delegates)
- **Interactive Event Schedule** and session highlights
- **Backend CMS** for real-time content updates
- **Performance Optimization** to ensure fast load times even under peak traffic

Technology Stack

Frontend:

- HTML5, SCSS
- JavaScript, Bootstrap / Tailwind CSS
- jQuery (for form workflows)

Backend:

- Laravel
- MySQL Database
- RESTful API Integration

Infrastructure & CMS:

- Secure Multi-Step Registration
- Email Notifications & Admin Approval Workflow
- SEO Tools, Google Analytics, and Tag Manager
- CDN for Global Performance

Key Results

-  Registration system handled 10,000+ users with zero downtime
-  2x increase in international traffic YOY
-  Admin team cut content update time by 70%
-  Page speed improved by 55% across devices

SALESWARP

CASE STUDY

- **Client:** SalesWarp
- **Industry:** E-commerce / SaaS (Order & Operations Management)
- **Website:** www.saleswarp.com
- **Services:** Website Redesign, UI/UX Strategy, Frontend & Backend Development, Module development

Client Overview

SalesWarp is a leading commerce operations platform that helps retailers streamline order, inventory, and fulfillment management. They support multi-channel selling with clients ranging from SMBs to large-scale enterprise retailers.

Challenge

SalesWarp needed a modernized, high-performing website to:

- **Clearly communicate product value** and feature set
- Improve lead generation via optimized landing pages
- Offer a **fast, mobile-friendly** user experience
- Enable internal teams to manage content easily

Our Solution

We partnered with SalesWarp to create a future-proof digital platform and worked on multiple modules:

- **UI/UX Overhaul** with clean navigation and compelling CTAs
- **We used Cake PHP / Core PHP to build the solution.**
- **SEO-optimized architecture** and blog integration
- **Responsive Design** for performance across all devices

Technology Stack

Frontend:

- HTML5, SCSS
- JavaScript, jQuery
- Bootstrap 5 / Tailwind CSS

Backend:

- CakePHP, Node
- MySQL

Infrastructure & CMS:

- PayPal payment gateway
- FedEx for shipping
- HubSpot CRM
- Google Analytics & Tag Manager
- Cloudflare CDN & Security

Key Results

- Cloudflare CDN & Security
-  Mobile performance score jumped to 92+ (Google Lighthouse)
-  Admins now update site content 5x faster via reusable modules

CASE STUDY

- **Client:** Electronics and Computer Software Export Promotion Council (ESC India)
- **Industry:** Government / Trade Promotion / IT Exports
- **Website:** www.escindia.in
- **Services:** Website Design, Development, Content Architecture, CMS Integration

Client Overview

ESC India is the official trade promotion body under the Government of India supporting IT and electronics exporters. It plays a pivotal role in enabling global market access through policy support, delegation facilitation, and organizing large-scale tech exhibitions like IndiaSoft and INDEE.

Challenge

ESC needed a modern, scalable, and informative digital presence that could:

- Act as a central hub for exporters, buyers, and government stakeholders
- Promote events, announcements, and schemes clearly
- Enable the ESC team to manage content and forms efficiently
- Showcase India's IT and electronics export capabilities in a global context

Our Solution

We partnered with ESC India to build a high-impact digital experience:

- **Modern UI/UX Design** aligned with ESC's national and global positioning
- **Content-First Architecture** to organize schemes, events, and member resources
- **Multi-role Admin Panel** for managing events, downloads, and applications
- **SEO-Optimized Development** to improve discoverability
- **Responsive Web Design** for optimal viewing across all devices

Technology Stack

Frontend:

- HTML5, CSS3, ReactJS
JavaScript, jQuery
- Tailwind CSS
- jQuery for interactive components

Backend:

- Laravel
- MySQL
- Custom CMS for page and form management

Infrastructure & CMS:

- Google Analytics, Tag Manager
- Cloudflare CDN CRM
- Form modules with admin approval workflows

Key Results

-  100% increase in site engagement post-launch
-  Over 3x faster access to policy documents and applications
-  Fully responsive & mobile-optimized platform
-  Reduced dependency on dev team via flexible CMS modules

Urban.^{Real Estate}

CASE STUDY

- **Client:** UrbanRealEstate.com.au
- **Industry:** Real Estate / Property Listings
Region: Australia
- **Website:** www.urbanrealestate.com.au
- **Services:** Website Design, Frontend & Backend Development, UX Optimization, Search Integration

Client Overview

Urban Real Estate is an Australian property portal helping users find and explore residential and commercial properties. It connects buyers, renters, and investors with real estate agencies through a fast, intuitive platform tailored for the local market.

Challenge

The client required a powerful property listing platform that could:

- Display thousands of listings with **advanced search filters**
- Deliver **fast performance** and great **mobile usability**
- Empower users with rich listing data, media galleries, and mapping
- Allow agents and admins to **easily manage content** via backend

Our Solution

We built a high-performance, SEO-friendly real estate platform with:

- **User-first UI/UX Design** optimized for browsing and lead capture
- **Custom Search Engine** with filters for location, price, type, and features
- **Property Detail Pages** with media galleries, maps, and enquiry forms
- **Agent Dashboard** to manage listings and performance analytics
- **CMS Integration** for seamless backend control by internal staff

Technology Stack

Frontend:

- HTML5, SCSS
- React.js / Next.js (for speed and routing)
- Tailwind CSS for responsive design

Backend:

- Node.js with Express
- MongoDB
- REST APIs & Google Maps Integration

Other Tools:

- AWS Hosting & Cloudflare CDN
- Elasticsearch (for lightning-fast property search)
- SEO schema for real estate listings
- Google Analytics + Tag Manager for tracking

Key Results

-  Property search load time improved by **65%**
-  Bounce rate reduced by **42%** on mobile
-  80% of leads now captured via smart enquiry forms
-  Agent dashboard adoption rate reached **100%** within 30 days

Home au

REAL ESTATE

CASE STUDY

- **Client:** HomeAu.net.au
- **Industry:** Real Estate / Property Technology
- **Region:** Australia
- **Website:** www.homeau.net.au
- **Services:** Website Design, Custom Development, UX Strategy, Property Listing Engine

Client Overview

HomeAu is an Australian real estate platform focused on connecting buyers, renters, and agents through a smooth and intelligent property search experience. With a growing user base, they required a strong digital presence to handle property discovery, agent profiles, and lead generation.

Challenge

HomeAu needed a full-scale solution that could:

- Present thousands of property listings with rich search functionality
- Offer an intuitive, fast, and mobile-optimized user experience
- Support agent onboarding, property management, and content control
- Improve site SEO and lead generation performance

Our Solution

We delivered a scalable real estate portal combining clean design with robust technology:

- **Modern UI/UX Design** for clarity, navigation, and conversions
- **Advanced Search System** with filters, maps, and quick previews
- **Agent Dashboard** to manage listings, leads, and analytics
- **Custom CMS** to manage property data, promotions, and news
- **Performance Optimization** for speed and mobile readiness

Technology Stack

Frontend:

- React.js
- Bootstrap
- HTML5, CSS3, JavaScript

Backend:

- PHP (Laravel)
- MySQL
- Google Maps API, REST APIs

Additional Tools:

- AWS Hosting & Cloudflare CDN
- Elasticsearch (for lightning-fast property search)
- SEO Schema Integration + Google Analytics

Key Results

- 🏠 3x increase in property views within 60 days
- 📱 55% improvement in mobile engagement
- 🚀 40% boost in qualified lead submissions
- 🔗 Seamless agent onboarding and self-service listing management

CASE STUDY

- **Client:** Joy of Toys
- **Industry:** Toy Retail / Family Entertainment
- **Region:** Singapore
- **Website:** www.joyoftoys.com.sg
- **Services:** E-commerce Website Design, Development, Booking Integration, UX Strategy

Client Overview

Joy of Toys is a popular indoor play space and toy store in Singapore offering curated, high-quality toys and playtime experiences. The brand needed a digital platform to reflect its clean, safe, and engaging in-person environment.

Challenge

Joy of Toys required a vibrant and functional website that could:

- Reflect their **family-friendly brand identity**
- Support **online bookings for play sessions**
- Enable **toy showcase and e-commerce functionality**
- Be easily managed by non-technical staff

Our Solution

We created a cheerful, easy-to-use eCommerce and booking platform with:

- **Custom UI/UX Design** tailored to children's products and parents' preferences
- **Online Booking System** for play sessions with calendar and slot selection
- **Product Catalog + CMS** for toys and merchandise
- **Mobile-first Experience** for parents on-the-go
- **Multilingual & SEO-ready architecture**

Technology Stack

Frontend:

- Responsive UI for all devices
- Bootstrap
- HTML5, CSS3, JavaScript

Backend:

- WordPress + WooCommerce
- PHP + MySQL
- Custom Booking Plugin Integration

Other Tools:

- Stripe / PayPal for payments
- Google Calendar sync for admin
- Google Analytics + Meta Pixel
- Image CDN for fast product load times

Key Results

-  70% increase in online play session bookings in the first 2 months
-  2x higher time spent browsing the toy catalog
-  E-commerce integration led to a **25% rise in direct sales**
-  Admin team reduced booking management time by **60%**

MAD KICKS

CASE STUDY

- **Client:** Mad Kicks
- **Industry:** Luxury Streetwear / Sneaker E-commerce
- **Region:** India & Middle East
- **Website:** www.madkicks.com/en-IN
- **Services:** UI/UX Design, E-commerce Development, Performance Optimization, SEO

Client Overview

Mad Kicks is a premier sneaker and streetwear brand offering curated collections of rare, exclusive, and high-end footwear from global labels. Operating in both Indian and Middle Eastern markets, they needed a high-performance e-commerce platform tailored to sneaker enthusiasts and collectors.

Challenge

The brand required a sleek, high-converting online store that would:

- Reflect the **premium and exclusive feel** of the products
- Ensure **fast performance and responsive browsing**
- Support **multiple regions and currencies**
- Provide **easy catalog management** and secure payment flows

Our Solution

We crafted a custom, scalable Shopify-based solution with:

- **Modern UI/UX** tuned for Gen-Z and sneakerheads
- **Multi-region setup** with localized language, currency, and URLs
- **Product launch countdowns**, waitlist integration & hype-driven layouts
- **Mobile-first performance optimization**
- **SEO & structured data** for better visibility and indexing

Technology Stack

Frontend:

- Shopify Liquid Templates
- HTML5, SCSS, JavaScript
- Tailwind CSS for clean layout

Backend:

- Shopify CMS
- Custom Shopify Apps (Inventory sync, Limited drop control)
- Multi-currency setup with dynamic pricing logic

Integrations:

- Stripe / Razorpay
- Klaviyo (for email automation & drops)
- Google Tag Manager, Meta Pixel, SEO Schema

Key Results

-  Page load speed improved by **48%** (GTmetrix A rating)
-  33% uplift in checkout conversions after redesign
-  60% more time spent per session on mobile
-  Seamless regional shopping experience led to **22% higher return visits**

CASE STUDY

- **Client:** Petarchi
- **Industry:** Pet Products / Architecture & Design
- **Region:** Global (Singapore-based)
- **Website:** www.petarchi.com
- **Services:** Website Design, Development, Brand Positioning, UI/UX Strategy

Client Overview

Petarchi is a unique brand that combines architecture and pet care by designing bespoke, architecturally inspired furniture for pets. They blend modern design aesthetics with animal wellness to create beautiful, functional spaces for pets and their owners.

Challenge

Petarchi needed a digital presence that could:

- Express their **brand philosophy** clearly and visually
- Showcase **custom-designed pet products** in a gallery-style format
- Support **inquiries and product storytelling** rather than mass e-commerce
- Provide a **seamless mobile and desktop browsing experience**

Our Solution

We created a clean, elegant, and minimalistic website with a focus on storytelling:

- **Minimalist UI/UX design** that lets the product speak for itself
- **Interactive galleries** to highlight product craftsmanship
- **Mobile-first experience** for design-conscious pet owners on the go
- **Custom CMS** for content flexibility and future scalability
- **Performance-optimized** for fast loading and smooth transitions

Technology Stack

Frontend:

- Responsive design across all screen sizes
- HTML5, SCSS, JavaScript
- Tailwind CSS for minimalist styling

Backend:

- WordPress with Custom Theme Development
- Elementor (for content blocks and modular flexibility)
- PHP + MySQL

Integrations:

- Google Analytics, Meta Pixel
- Image CDN for optimized galleries
- SEO-structured content and schema integration

Key Results

-  75% increase in engagement with product gallery pages
-  2x more inquiries received via contact forms within 30 days
-  Mobile bounce rate reduced by **45%**
-  Clear and elevated brand storytelling across digital touchpoints

CASE STUDY

- **Client:** Bluebird Solar
- **Industry:** Renewable Energy / Solar Solutions
- **Website:** www.bluebirdsolar.com
- **Services:** Website Redesign, Web Development, CMS Integration, SEO Optimization, Technical Consultation

Client Overview

Bluebird Solar is a pioneer in the solar energy industry in India, offering high-efficiency solar panels and complete energy solutions. The client needed a website that reflected their innovation, improved user engagement, and supported lead generation for both B2B and B2C segments.

Challenge

- The previous website lacked mobile optimization, visual appeal, and clear product communication.
- The client required a professional, fast-loading platform that could effectively showcase their product range and drive inquiries.

Our Solution

We crafted a scalable, modern website with enhanced UI/UX and integrated SEO best practices:

- Intuitive product catalog and navigation
- Custom CMS for dynamic product updates
- Mobile-first, responsive design
- Technical SEO setup and optimization

Technology Stack

Frontend:

- HTML5, CSS3, JavaScript
- Bootstrap

Backend:

- PHP
- Laravel

CMS:

- Custom CMS

SEO Tools:

- Google Analytics
- SEMrush
- Yoast SEO

Key Results

-  Website traffic improved by **60%**
-  Inquiry rate increased by **45%**
-  Page load speed optimized by **35%**
-  Enhanced search engine rankings for solar product keywords

ново.

CASE STUDY

- **Client:** Novo Cabs
- **Industry:** Transportation / Ride-Hailing
- **Region:** India
- **Link:** Novo Cabs – Android App
- **Services:** Mobile App Development, Backend Architecture, UI/UX Design, Admin Dashboard

Client Overview

Novo Cabs is an innovative ride-hailing service designed to provide users with affordable, reliable, and fast urban transport. Competing with industry giants, they needed a custom-built mobile platform tailored to their unique features, pricing models, and local market needs.

Challenge

Novo Cabs needed a full-scale app ecosystem to:

- Offer a **seamless user ride-booking experience**
- Handle **real-time driver-user communication and location tracking**
- Manage fare calculations, wallet payments, and ride history
- Provide an **admin backend** for driver management, analytics, and reporting

Our Solution

We delivered a cross-platform ride-booking ecosystem using the latest technologies:

- **React Native mobile app** for iOS and Android (shared codebase, cost-efficient)
- **Real-time features:** GPS tracking, push notifications, in-app chat
- **Robust backend** built on **Node.js + Laravel** for scalability and speed
- **Admin panel** for managing bookings, drivers, commissions, and disputes
- **Wallet, coupon, and fare logic integrations** for pricing flexibility

Technology Stack

Mobile App (Frontend):

- React Native
- Redux for state management
- Google Maps API for real-time tracking

Backend:

- Node.js (real-time engine for trip management, sockets)
- Laravel (RESTful API services, admin logic)
- MySQL / MongoDB (ride & user data)

Integrations:

- Firebase (for push notifications)
- Razorpay / Stripe (for payments)
- Twilio (for OTP + communication APIs)

Key Results

- 🚗 Over **50,000+ installs** in the first launch phase
- ⚡ 99.9% uptime for trip booking and tracking services
- 📊 Driver on-boarding process reduced from 2 days to **4 hours**
- 📈 Real-time ride status and analytics improved user retention by **37%**

CASE STUDY

- **Client:** Blackfinch
- **Industry:** Finance / Travel Tools
- **Platform:** Android App
- **Link:** View on Google Play
- **Services:** Mobile App Development, UX Design, API Integration, Performance Optimization

Client Overview

Blackfinch Currency Converter is a lightweight, real-time currency conversion app designed for travelers, finance professionals, and everyday users needing fast, reliable exchange rate data on the go.

Challenge

The app required a clean, accurate, and responsive platform that could:

- Deliver **real-time currency exchange rates** across 160+ currencies
- Allow **offline access with last saved rates**
- Be **lightweight and optimized for low-end devices**
- Provide **quick conversions with minimal user input**

Our Solution

We developed a sleek and high-performing currency app with:

- **Minimalist and intuitive UI** focused on speed and simplicity
- **Live exchange rate API integration** for real-time data accuracy
- **Offline mode** with intelligent caching for frequent users
- **Favorites feature** to quickly access most-used conversions
- Optimized build to run efficiently on devices with limited memory

Technology Stack

Mobile App (Frontend): Backend:

- Java + Android SDK (Native Android)
- XML layouts with Material Design principles
- Exchange Rate APIs (e.g., OpenExchangeRates, CurrencyLayer)
- Firebase for crash reporting and analytics

Performance Tools:

- Glide (for lightweight image loading)
- Room Database (for offline caching)
- Retrofit (for efficient API calls)

Key Results

- 📥 **100,000+ downloads** on Google Play
- ⚡ App size under 5MB, optimized for low bandwidth usage
- 🌐 Available globally with support for **160+ currencies**
- 💬 Rated 4.5+ stars for usability and speed

CASE STUDY

- **Client:** Jain Shadi Milan
- **Industry:** Matrimonial / Social Networking
- **Platform:** Android
- **Link:** View on Google Play
- **Services:** Mobile App Development, UI/UX Design, Backend Architecture, API Integration

Client Overview

Jain Shadi Milan is a matrimonial platform tailored for the Jain community, aiming to connect individuals seeking life partners who share similar values and cultural backgrounds. The platform emphasizes authenticity and user privacy, providing a trusted space for meaningful connections.

Challenge

The client sought to develop a user-friendly mobile application that would:

- Facilitate **profile creation and browsing** with ease
- Ensure **secure and private communication** between users
- Provide **authentic and verified user data**
- Operate smoothly on a wide range of Android devices

Our Solution

We delivered a robust and intuitive Android application featuring:

- **Clean and intuitive UI/UX** for seamless navigation
- **Secure user authentication** and data encryption
- **Advanced search and filter options** to match user preferences
- **Real-time chat functionality** for direct communication
- **Admin dashboard** for user management and content moderation

Technology Stack

Mobile App (Frontend):

- Java + Android SDK
- XML for UI layouts
- Material Design components

Backend:

- Node.js with Express.js
- MongoDB for database management
- JWT for secure user authentication

Performance Tools:

- Firebase for push notifications
- Google Maps API for location-based features
- Twilio for SMS verification

Key Results

-  Achieved **50,000+ downloads** within the first 6 months
-  Maintained a **high user retention rate** due to app reliability and trustworthiness
-  Facilitated **thousands of successful matches** through the platform
-  Received positive user feedback highlighting the app's ease of use and effectiveness

CASE STUDY

- **Client:** CalCon
- **Industry:** Productivity / Utilities
- **Region:** Global
- **Platform:** Android
- **Link:** View on Google Play
- **Services:** Mobile App Development, UI/UX Design, Backend Development, API Integration

Client Overview

CalCon Calculator is a comprehensive calculator app offering over 500 calculators and converters, catering to a wide range of user needs—from basic arithmetic to complex financial and scientific computations. Designed for users worldwide, CalCon aims to provide a one-stop solution for all calculation requirements.

Challenge

The client sought to develop a feature-rich calculator application that would:

- Consolidate **multiple calculators and converters** into a single platform
- Offer a **user-friendly and intuitive interface** for diverse user demographics
- Ensure **real-time performance** and **offline accessibility**
- Facilitate **easy addition of new calculators** based on user requests

Our Solution

We delivered a robust and scalable mobile application featuring:

- **Modular architecture** allowing seamless integration of new calculators
- **Secure user authentication** and data encryption
- **Categorized navigation** for easy access to various calculator types
- **Offline functionality** enabling users to perform calculations without internet connectivity
- **Responsive design** ensuring optimal performance across a range of Android devices

Technology Stack

- Mobile App (Frontend):**
 - Flutter (for cross-platform mobile development)
 - Material Design components for intuitive UI
- Backend:**
 - Laravel (PHP framework) for RESTful API development
 - MySQL for structured data storage
 - Vue.js for the admin dashboard and web interface
- Performance Tools:**
 - Firebase for analytics and crash reporting
 - In-app purchase APIs for monetization
 - Localization support for multiple languages

Key Results

-  Achieved **10,000+ downloads** within the first few months
-  Maintained a **4.5-star rating** on Google Play
-  Enabled **daily updates** with new calculators based on user feedback
-  Garnered a **global user base**, with significant engagement from various regions

- **Client:** CinesTool
- **Industry:** Entertainment / Cinema Management
- **Platform:** Android
- **Link:** View on Google Play
- **Services:** Mobile App Development, Backend Development, Admin Dashboard, UX Optimization

Client Overview

CinesTool is a digital utility designed for cinema industry professionals to manage schedules, media content, and operational workflows. Tailored to meet the needs of film distributors, projectionists, and theater managers, it streamlines daily cinema management.

Challenge

CinesTool needed a scalable solution to:

- Distribute **media content and schedules** to theater teams efficiently
- Enable **real-time updates** for showtimes and promotional materials
- Provide **offline access** to crucial documents and schedules
- Manage **user roles and content permissions** through a centralized backend

Our Solution

We built a feature-rich mobile platform powered by a robust backend:

- Developed a **React Native mobile app** for Android, ensuring cross-device compatibility
- Built a **Laravel-based backend** for managing media content, notifications, and schedules
- Integrated **real-time push notifications** for instant updates
- Designed a user-friendly **admin dashboard** with user-level permissions and analytics
- Enabled **offline caching** for media files and time-sensitive data

Technology Stack

Mobile App (Frontend):

- React Native
- Redux (for state management)
- Local caching for offline support

Backend:

- Laravel (PHP framework)
- MySQL for structured data storage
- REST APIs for secure communication

Performance Tools:

- Firebase Cloud Messaging for push notifications
- AWS S3 for cloud-based media hosting
- Role-based access controls via Laravel middleware

Key Results

-  **Over 10,000+ app installs** in the first launch phase
-  Real-time scheduling updates reduced manual coordination by **70%**
-  Media access time improved by **3x** through cloud hosting
-  Increased team efficiency in multi-location cinema chains

CASE STUDY

- **Client:** Qualitas Health
- **Industry:** Healthcare / Telemedicine
- **Platform:** Android
- **Link:** View on Google Play
- **Services:** Mobile App Development, Backend Development, UI/UX Design, API Integration

Client Overview

Qualitas is one of Southeast Asia's leading healthcare groups, and the Qualitas Telemed app is its digital solution for remote healthcare delivery. The app allows users to consult with doctors virtually, access medical records, and manage appointments—all from their smartphones.

Challenge

Qualitas needed a secure, scalable, and user-friendly telemedicine platform that would:

- Offer **video consultations** with licensed doctors
- Allow **appointment booking** and **e-prescriptions**
- Enable **patient data management** securely and privately
- Comply with **healthcare regulations and standards**

Our Solution

We developed a full-featured telemedicine solution with:

- **React Native mobile app** for seamless cross-platform support
- **Real-time video calling integration** for doctor-patient consultations
- **Appointment booking system** with time slot availability and reminders
- **EHR features** for accessing prescriptions, visit history, and documents
- A secure, high-performance **Node.js backend** with role-based access

Technology Stack

Mobile App (Frontend):

- React Native
- Redux (for state handle)
- WebRTC (for secure video consultations)

Backend:

- Node.js with Express.js
- MongoDB for patient records
- JWT-based authentication for data privacy

Performance Tools:

- Firebase (push notifications)
- Payment gateways for e-consult fees
- AWS S3 for medical document storage

Key Results

-  Achieved **10,000+ installs** across urban and rural Malaysia
-  Enabled **thousands of consultations/month** within 3 months
-  100% compliance with healthcare data privacy standards
-  Reduced clinic burden and improved patient access to care

CASE STUDY

- **Client:** GoodApp
- **Industry:** Lifestyle / Services Marketplace
- **Platform:** Android
- **Link:** View on Google Play
- **Services:** Mobile App Development, Backend Development, UI/UX Design, API Integration

Client Overview

GoodApp is a digital service aggregator that connects customers with local service providers—from house cleaning to repairs. The app empowers users to book, manage, and track various service appointments through a clean, intuitive interface.

Challenge

The client wanted a dynamic customer-facing app that could:

- Allow **real-time service booking and provider matching**
- Handle **location-based services** and time-slot scheduling
- Offer **user profiles**, service history, and payment integrations
- Scale across multiple regions with multi-language support

Our Solution

We built a robust customer application and backend system with:

- **React Native mobile app** for Android for fast performance and smooth UI
- **Geo-location & smart filters** to match users with nearby service providers
- **Integrated booking engine** with confirmation and rescheduling features
- **In-app chat** for real-time support and communication
- **Admin dashboard** and analytics to track service usage and customer data

Technology Stack

Mobile App (Frontend):

- React Native
- Redux (for state management)
- Google Maps SDK for location services

Backend:

- Laravel (PHP framework)
- MySQL database
- RESTful APIs for seamless mobile-backend communication

Performance Tools:

- Firebase (push notifications)
- Stripe/Razorpay for secure payments
- Twilio for OTP and communication

Key Results

-  Over **10,000+ downloads** in the first launch cycle
-  Reduced booking time by **60%** through intuitive flow
-  Boosted user engagement with real-time service updates and alerts
-  Expanded into multiple metro cities with scalable backend architecture

CASE STUDY

- **Client:** IndePro
- **Industry:** FinTech / Business Tools
- **Platform:** iOS
- **Link:** View on App Store
- **Services:** Mobile App Development, Backend API Development, UI/UX Design, SaaS Integration

Client Overview

IndePro is designed to simplify business finance management for freelancers, contractors, and small businesses. It enables users to generate professional invoices, manage clients, and create real-time estimates on the go.

Challenge

The client needed a lightweight, secure, and scalable solution to:

- Enable **on-the-fly creation of invoices and estimates**
- Manage **client databases** and payment statuses
- Provide **professional templates** and branded invoice PDFs
- Sync data across devices with **cloud backup** and **offline mode**

Our Solution

We built a responsive and user-friendly mobile app that delivers:

- **A React Native frontend** for seamless cross-platform functionality
- A **Laravel backend** powering secure API communication and cloud sync
- **Dynamic PDF generation** with template customization
- **Client and product database management**
- **Offline invoice creation** with cloud sync when reconnected

Technology Stack

Mobile App (Frontend): Backend:

- React Native
- Redux (for state handling)
- Native PDF export libraries
- Laravel (REST API)
- MySQL for structured client and invoice data
- JWT for secure login/authentication

Performance Tools:

- AWS S3 for document storage
- Stripe for future in-app payment support
- Firebase for push notifications

Key Results

-  Launched successfully on the **Apple App Store (UAE)**
-  Created **10,000+ invoices and estimates** within the first 3 months
-  Improved invoice workflow efficiency by over **70%**
-  Empowered small businesses to manage finances without a desktop

GetKart

CASE STUDY

- **Client:** GETKART, INC
- **Industry:** E-commerce / Classifieds Marketplace
- **Platform:** iOS, Android
- **Link:** View on App Store
- **Services:** Mobile App Development, UX Design, Backend/API Development, Listings Management, Geo-based Matching

Client Overview

GETKART is a hyperlocal classified marketplace enabling users to buy, sell, or exchange goods and services within their communities. From electronics and furniture to job listings and clothing, GETKART empowers users to connect with real buyers and sellers in their vicinity—quickly, securely, and with minimal friction.

Challenge

GETKART needed a mobile-first platform that could:

- Support scalable listing and search capabilities across diverse categories
- Deliver a clean, responsive UX for both buyers and sellers
- Handle geo-location-based listings and real-time updates
- Provide safe, verified user interactions to reduce spam/fraud

Our Solution

We delivered a robust mobile marketplace solution with:

- **React Native apps** for iOS and Android to ensure cross-platform consistency
- A secure **Laravel backend** for user management, listings, and messaging
- **Geo-location integration** to enable hyperlocal matching and delivery options
- **Listing boost features**, including “featured” ads and highlighted listings

Technology Stack

Mobile App (Frontend):

- React Native (iOS & Android apps)
- Native modules for camera, notifications, maps

Backend:

- Laravel (PHP framework)
- MySQL for structured listing and user data
- RESTful APIs for dynamic feed updates and interactions

Performance Tools:

- Firebase (push notifications, chat sync)
- AWS S3 (media hosting for images & videos)
- Razorpay (in-app listing boost payments)

Key Results

-  Launched across iOS and Android with >90% crash-free sessions
-  Enabled 100,000+ geo-based listings within the first 6 months
-  Reduced spam by 80% via verified profiles and AI-assisted moderation
-  Drove new revenue through paid promotions and listing boosts

CASE STUDY

- **Client:** Prehab
- **Industry:** Health & Wellness / Physical Therapy
- **Platform:** iOS, Desktop (Electron)
- **Link:** View on App Store
- **Services:** Mobile App Development, Desktop App Development, Backend/API, UX Strategy, Video & Progress Tracking

Client Overview

Prehab is a digital rehabilitation platform empowering users with personalized physical therapy programs. The goal: to provide on-demand access to expert-guided routines, pain-relief education, and recovery tracking—all without visiting a clinic.

Challenge

Prehab wanted a hybrid solution that could:

- Deliver **interactive therapy sessions** via mobile and desktop
- Track **daily progress** and physical improvements
- Include **video demonstrations** for guided routines
- Ensure **data sync and consistency** across platforms
- Be **HIPAA-compliant** with strong data security

Our Solution

We developed an integrated ecosystem with:

- **React Native app** for iOS for seamless user experiences
- **Electron desktop app** for users preferring larger screens
- A secure **Laravel backend** to manage sessions, user data, and analytics
- **Video streaming & exercise modules** with real-time tracking
- **Progress dashboards**, reminders, and therapist feedback loops

Technology Stack

Mobile App (Frontend):

- React Native (iOS app)
- Electron (Cross-platform desktop app)
- Redux for state management

Backend:

- Laravel (PHP)
- MySQL for data storage
- RESTful APIs for multi-device sync

Performance Tools:

- AWS (video hosting & secure media streaming)
- Firebase for push notifications
- Stripe for subscription and payments
- HIPAA-compliant encryption protocols

Key Results

-  Cross-platform launch on iOS & desktop with consistent UX
-  Over **500+ therapy sessions/day** within 90 days
-  Enabled **custom recovery plans** with measurable progress
-  Fully compliant with **health data regulations** and security best practices
