

Chatbot for Multi-Market Store

Requirement

Reducing the floor staff workload and without involving any customer executive customer wanted to build an automatic chat bot system for their online customer. The major challenge was to develop the chat bot system with their ecosystem connected with chain stores and tracking real time products.

Recommended Solution

Customer interactions with Chatbot are simple, intuitive, and engaging keeping customer experience on the top and we delivered the app and integrated the chat both functionality in store.

We made a mechanism using latest technology like Dialogflow, Google API to help provide end to end details about the products during customer shopping.

Technology

- Dialogflow & Google Cloud integration
- iPhone App: iOS – Xcode, Objective C, Instruments, iPad Simulator & Devices
- Android App: Android Studio IDE, Google Android SDK
- Backend: PHP, MySQL, APIs, HTML5, CSS3

Result

Client saved staff cost by 30%. Solution made feasible with 24 × 7 availability to end customers. This solution redefined client preferences and help in floor assistant. Solution made application and store helpful for customers.
